PROFESSIONAL SUMMARY

Full Stack Developer with hands-on internship experience building complete applications using Django REST Framework and React. Comfortable owning a feature end-to-end: REST API design, PostgreSQL schema design, JWT authentication, and React UI development, including real-time features with WebSockets and Celery. Independently built a full-stack budgeting platform, an e-commerce accessories store with Razorpay payment integration, and a real-time chat application using Django REST Framework, WebSockets, Celery, and Redis. Seeking a Full Stack Developer / Python Developer / Django Developer role to design, build, and ship user-facing features across the stack.

TECHNICAL SKILLS

Languages: Python 3, JavaScript (ES6+)

Backend & Real-Time: Django, Django REST Framework, FastAPI, Django Channels, Celery, WebSockets, Redis

Frontend: React, AngularJS, HTML5, CSS3

Databases: PostgreSQL, MySQL, SQLite — Schema Design, Indexing, Query Optimization

APIs, Auth & Payments: REST API Design, JWT, OAuth 2.0, RBAC, OpenAPI, Razorpay Payment Gateway

Testing & Tools: Selenium, Pytest, Git, GitHub, Postman, VS Code

INTERNSHIP EXPERIENCE

Python Full Stack Developer Intern — JSpiders, Hyderabad

Aug 2024 – Mar 2025 | Stack: Django, React, PostgreSQL, MySQL, DRF

- Built full-stack applications end-to-end using Django (backend) and React (frontend), following MVT and component-based architecture across 3+ production-style modules.
- Developed RESTful APIs with DRF and integrated them into React UI components, ensuring seamless data flow between frontend and backend.
- Optimized PostgreSQL/MySQL queries and schemas, improving CRUD efficiency for datasets with 500+ records.
- Secured applications with JWT authentication and role-based access control (RBAC); validated APIs using Postman within a Git/GitHub workflow.

PROJECTS

Budget Management Platform

Django REST Framework, React 19 + TypeScript, PostgreSQL, WebSockets, Celery, Redis

- Architected a decoupled full-stack budgeting platform, building the React 19 + TypeScript frontend and Django REST Framework backend independently end-to-end.
- Designed a drag-and-drop Kanban UI and budget/project health dashboards, backed by real-time WebSocket time tracking and Celery-driven background tasks.
- Built BI/financial reporting features including Excel/PDF export and a Profit Margin KPI dashboard, with role-based access control across both layers.
- Implemented a Playwright-based end-to-end test suite using factory_boy and the Page Object Model, with GitHub Actions CI/CD running PostgreSQL and Redis service containers.

E-Commerce Accessories Store

Django, DRF, Razorpay, WebSockets, Celery, Django Channels, Python (OOP), HTML5, CSS3, JavaScript, Selenium

- Built a full-stack e-commerce platform for shopping accessories using Django and DRF, applying object-oriented Python design for product catalog, cart, and order management modules.
- Integrated the Razorpay payment gateway for secure checkout, handling payment verification, order confirmation, and webhook-based payment status updates.
- Implemented real-time order and notification updates using Django Channels and WebSockets, with Celery managing async tasks like confirmation emails and inventory updates.
- Developed a responsive storefront with HTML5, CSS3, and JavaScript, and wrote Selenium test suites covering cart, checkout, and payment flows end-to-end.

Real-Time Chat Application

React, Django REST Framework, WebSockets, Celery, Redis

- Built a real-time chat application (React frontend, DRF backend) with one-to-one and group messaging over WebSockets, Celery/Redis-driven asynchronous notifications and offline message queuing, and Redis pub-sub-backed typing indicators and presence tracking.

Automatic YouTube Scripting Tool

Python, YouTube Data API v3, OAuth 2.0 | 2023 – 2024

- Built a Python automation framework reducing manual content-creation effort by 60%, saving 15+ hours/week, with OAuth 2.0 authentication, rate limiting, and robust error handling.

LinkedIn Clone UI (Angular Project)

Angular, TypeScript, HTML5, CSS3, Angular Material, RxJS | 2022 – 2023

- Built a responsive LinkedIn Clone UI with profile management, social feed, connections, and messaging using reusable components.

EDUCATION

B.Tech, Computer Science & Engineering — Vikas Group of Institutions, JNTU Kakinada 2020 – 2024 | CGPA: 6.8/10.0

Intermediate (MPC) — GSR & KSR Junior College 2018 – 2020
